

SDLC Assignment - 2

Requirements Gathering for a community App

Interviewing a fictional client who represents a neighborhood community group.

- (i) what is the purpose of the App
- To help residents organize, discover, and participate in local community events.
- (ii) what types of events should the app support?
- social gatherings, clean-up drives, fundraisers, workshops, and town hall meetings.
- (iii) who are the target users?
- Residents, organizers and community volunteers.
- (iv) what features are essential at launch?
- Event creation and scheduling.
 - RSVP and attendance tracking
 - Notifications and reminders
 - location mapping and filters
 - User registration / login
- (v) Do users need roles or permissions?
- Yes, event organizers should have more privileges than general users.
- (vi) should there be any integration (eg- calendar, social media)?
- yes, google calendar and optional facebook sharing.

(vii) Are analytics or reports needed?

- Basic attendance stats per event would be helpful

Functional Requirements

- Users can register, login and manage profiles.
- Event creators can post, edit or delete events.
- Users can browse / filter local events.
- RSVP system with confirmation emails.
- push notifications for reminders and updates.
- calendar sync with Google.
- Admin panel for event moderation.

Non-functional Requirements:

- Mobile Responsiveness
- Fast loading time
- Data privacy and security
- uptime $\geq 99.5\%$.

Requirements Documentation & Tracing:

(i) Tools for Documentation:

- use User stories
- use use case Diagrams and Requirements

Traceability Matrix (RTM)

(ii) Requirements Traceability Matrix (RTM):

A table mapping each requirements to:

- Stakeholder origin
- Design elements
- Test cases
- Implementation status

Example RTM Entry:

Req ID	Requirement	Source	linked Design	Test case ID	Status
FR-01	user can create an event	client	wireframe #2	TC-01	pending
